## PROJECTS

### Martial Dojo (MERN Stack)

[Live Site](#) | [Github Client](#) | [Github Server](#)

Online learning management system.

#### Features :

- Students, instructors, and admins have distinct roles and privileges, role-based access allowing for efficient management and supervision.
- Instructors can create, upload, and update courses, admins ensure the quality and relevance of content before approving them for public access.
- Students can pay with stripe to buy the classes. This site allows to toggle between dark and light theme.

**Technology Used:** React, TailwindCSS, JWT, React-router, Firebase, MongoDB, Express.js, Firebase/auth, express.js, Stripe, axios, tanstack/react-query, sweetalert2, swiper, etc.

### Wild Joy (MERN Stack)

[Live Site](#) | [Github Client](#) | [Github Server](#)

A mern-stack project, where user can buy & sell animal toys also a user can add it

#### Features :

- Added search feature in All Toys page where you can find toys by searching it's name.
- Used Firebase authentication system for login or register and also can log in with Google directly.
- Used CRUD Operation that's why, after login, a user can add toys on the site for sell. Users can also delete or manage their toy details at any time.

**Technology Used:** Html , CSS , Tailwind , React Router , Vite , Firebase , json , express , vercel , mongodb , React Tab , AOS , etc.

### Recipe & Riot (React Spa)

[Live Site](#) | [Github Client](#) | [Github Server](#)

A single page application, where user can see different types of recipes from different chef's.

#### Features :

- Used lazy loader for adding extra effect on loading the data and a spinner loader in the project.
- There are some protective routes like view recipes. Only logged-in users can see them.
- Used firebase authentication for creating an account or login into the website with Google, GitHub, or Email and password

**Technology Used:** Html , CSS , React Bootstrap , React Router , Vite , Firebase , json , express , vercel
